PROJECTS

Such Good Helpers (In Development) — <https://github.com/cetges86/volunteer-app>

Portal for teachers to request volunteer help from parents of students to be used by local PTA and elementary school. Being built as a solo project for an associate, with a frontend built using React, and backend with Node.js/Express.

KyleEtges.com — <https://etgesmusic.com/>

Solo project web page built using ReactJS with custom CSS and CSS grid frontend, with an Express/Node backend.

Yearbook() — <https://aviato-yearbook.herokuapp.com/>

Constructed networking/social platform for Bootcamp graduates. Offers job search tools, continuing education, and contact links for fellow students. Built with a team of four developers, though I constructed most of the front end and database layers, built with React.js and MongoDB, respectively.

Go Food Yourself — <https://go-food-yourself.herokuapp.com/>

Full stack application built with a group of four people with MySQL/Sequelize database that searches recipes based on ingredients supplied by users. Front-end built with jQuery and Materialize.css framework, backend with node/Express.
